

**Job Title** Product Manager  
**Company/Department** RSA – The Security Division of EMC  
**Location**  
**Reports to**  
**Type of position**  Full-time  Part-time  Contractor  Intern / Student

**GENERAL DESCRIPTION**

**JOB DESCRIPTION**

The product manager will be responsible for the success of RSA’s authentication and fraud protection product. He/she will work closely with R&D, sales, customers and other parts of the company to collect customer needs, market inputs, and other product requirements. He/she will then consolidate these requirements into a product roadmap while prioritizing the various requirements and balancing them with R&D resources and customer deployment needs. The product manager will then follow up with a detailed product requirements document to be implemented by the R&D department.

**WORK EXPERIENCE REQUIREMENTS**

A successful product manager will possess the following capabilities:

- A strong understanding of market dynamics and drivers
- Strong understanding of the business aspects related to the product line
- Previous experience as a system architect/engineer in a software company, preferably in an internet application environment
- At least 1 year product management experience in a software company
- At least 2 years experience working with international customers
- Ability to work in a demanding, fast-paced and rapidly evolving environment
- Strong inter-personal skills
- Excellent English – both verbal and writing
- Effective presentation skills
- B.SC in Computer Science or equivalent; MBA an advantage

**EDUCATION REQUIREMENTS**
